

Infopath Sharepoint Questions

I have a Sharepoint site on which i want to put this infopath form but every client machine will not have infopath . i am having infopath 2003 . I dont want to purchase infopath 2007 . What other option is available . I dont want to code the form in asp .net

Answer :: You need MOSS 2007 Enterprise edition to have web-based (Infopath) forms.

Otherwise you will have to do .net forms or custom lists. [Read More](#)

I have upgraded my sharepoint services 3.0 to the full blown office sharepoint server 2007 with the single goal of using browser-based InfoPath forms.

- The upgrade seemed to go fine and sharepoint is running just fine but the forms services are no where to be found.

- From what I have read I should have some config options for forms services under Central Administration > Application Management but, there is nothing.

- I'm thinking that the forms server feature never got installed? I'm not sure how that is possible but I am missing something for sure.

- Please help!

Answer :: Forms Services requires the ENTERPRISE version, you most likley installed the Standard. I don;t think there is anything to configure.

BTW- If you are using an MSDN license, just update license with the enterprise product key. [Read More](#)
