

## Sharepoint Alerts Questions

Alerts notify you when information that interests you is added or updated on the portal site and associated content sources. You can define your areas of interest and identify how and when you want to be told about something new or updated that you may want to investigate. You can add an alert to track new matches to a search query, changes to content in an area, or a new site added to the Site Directory.

I want to sent a alert mesage to all the users of a particular group..anybody have any idea abt how to do it

Answer :: Create a list.

From the Actions menu, select "Alert Me"

Under "Send Alerts To", enter the group name and press CTRL+K to validate it, or choose the group from the people picker.

Select your other options, and click OK.

You may need administrative rights to the list or site in order to see the "Send Alerts To" action. .... [Read More](#)

I am using (and learning about) Windows Sharepoint Services, and have users on my Sharepoint site who set up themselves to get alerts when new topics are posted. However, they only get a notice that something was posted, with no indication as to the topic of the post.

-  
Is there a way for them to get the topic too?

-  
TIA

Answer :: We use the same thing here at my job and it does put the topic in the email alert. there's nothing special to do in creating the alert, its just the person who added the item that needs to put a topic or title in. ....
