

## Sharepoint Examples Questions

I've got a WSS site with a number of documents in different document libraries. I'd like to be able to collect all the files for a given client with one search (the client name is a value denoted in a column). I wouldn't mind doing a flat search though. For example: if our client is Company X, I'd be willing to find all the documents that contain "Company X" in any value, however the search utility is most convenient.

-  
With that said, when I attempt to search, I get the message: "The search request was unable to connect to the Search Service."

-  
Can anyone give me a hand with this feature?

Answer :: because you have enable in central administration of search settings in shared ser vices .... [Read More](#)
